

ZAMINAT.eco

Pitch Day Action Plan, Presentation Instructions & Preparation Checklist

Website-Based Pitch | Russian + English | 3-Minute Format | Founder + Team

CORE POSITIONING

A full-cycle Waste-to-Life infrastructure platform from Uzbekistan.

Prepared for	Sukhrobjon Rikhsiboev, Azamat Elchibekov, Khondamir Alibekov
Purpose	Investor / Green-Tech Pitch Day preparation
Format	No PPT — controlled website demo and live storytelling
Date	2026-06-15

1. Executive Strategy

This document is designed as a practical preparation guide for the ZAMINAT.eco Pitch Day. The goal is not only to memorize the approved 3-minute script, but to stage the entire performance as a premium, credible, investor-ready demonstration of a scalable green-tech infrastructure company.

The pitch must make the audience understand one central idea:

ZAMINAT.eco is not a recycling project. It is a full-cycle Waste-to-Life infrastructure platform where waste becomes products, products create revenue, revenue supports visible public impact, and digital technology makes the process transparent.

The Impression We Must Create

- A serious founder-led company, not a student idea.
- A clear product business, not only a charity initiative.
- A scalable infrastructure model for Uzbekistan and later Central Asia.
- A team with vision, operational readiness, digital capability, and execution discipline.
- A brand that can attract investors, government partners, schools, sponsors, and early customers.

Core Pitch Formula

Waste -> Material -> Product -> Revenue -> Impact -> Trust -> Scale

Every part of the website demo and every line of the speech should support this logic. Avoid over-focusing on one feature. ZAMINAT.eco must be presented as an integrated ecosystem: production, products, EcoApp, EcoKids, social impact, and business scale.

2. Team Roles and Stage Format

Team Member	Stage Role	Main Responsibility	Pitch Behavior
Sukhrobjon Rikhsiboev	Founder / CEO / Vision & Strategy	Opening, product engine, EcoKids, traction, emotional leadership	Strong, visionary, confident. Speak with controlled pauses.
Azamat Elchibekov	Operations / Execution / Partnerships	English business sections, scale, revenue channels, final close	Calm, operational, investor-facing. Sound precise and prepared.

Khondamir Alibekov	Digital Product / Platform / Website Demo	Controls the website demo, transitions, interactive flow	Silent technical operator during 3 minutes; ready for Q&A after pitch.
--------------------	---	--	--

Recommended Stage Arrangement

- Sukhrobjon stands slightly center-left, closest to the audience. He opens and carries the emotional authority of the pitch.
- Azamat stands center-right, slightly closer to the website screen when explaining business and scale.
- Khondamir stands near the laptop or clicker position and controls the pitch website. He must never search or improvise on screen during the pitch.
- All screen transitions must be pre-tested and controlled with one simple action: Next, click, or scroll to anchor.

3. Approved 3-Minute Pitch Script

Use this approved script as the core speaking version. Do not expand during the live pitch unless the judges give additional time. The total delivery must stay within 3 minutes.

0:00–0:20 — Sukhrobjon / Russian / Opening

Добрый день.

Меня зовут Сухробжон Рихсибоев, я основатель ZAMINAT.eco.

Со мной в команде — Азамат Эльчибеков и Хондамир Алибеков.

Сегодня мы представляем не просто экологический проект.

Мы представляем новую инфраструктурную модель для Узбекистана.

Пластик и старые шины сегодня воспринимаются как мусор.

Мы видим в них другое: сырьё, продукты, рабочие места, школы, парки и новую экономику.

ZAMINAT.eco — это система, где отходы не заканчивают жизнь на свалке.

Они начинают новую жизнь в городской инфраструктуре.

0:20–0:45 — Azamat / English / What We Build

ZAMINAT.eco is a full-cycle Waste-to-Life platform from Uzbekistan.

We collect plastic and tire waste, process it into recycled materials, and transform it into market-ready infrastructure products: eco-tiles, curbs, benches, panels, Art Tiles, and future modular building elements.

But the key point is this:

We are not building only a recycling workshop.

We are building a connected green-tech ecosystem where production, digital transparency, education, and public impact work together.

0:45–1:15 — Sukhrobjon / Russian / Product Engine

Наша основа — это реальные продукты, которые можно продавать, устанавливать и масштабировать.

Мы начинаем с понятных рынку направлений: резиновая плитка для детских и спортивных площадок, пластиковая плитка, бордюры, элементы благоустройства и Art Tiles.

Art Tiles — это особая линейка: экологичный продукт с дизайном, историей и социальной ценностью.

Часть коммерческой прибыли от таких продуктов может направляться на общественные проекты: школы, детские сады, парки и махалли.

То есть impact у нас не отдельно от бизнеса.

Он встроен в модель роста.

1:15–1:43 — Azamat / English / Digital Transparency Layer

The second layer is our digital platform: EcoApp.

EcoApp connects citizens, schools, mahallas, volunteers, sponsors, investors, and government partners.

Through EcoMap, users can see collection points and eco-actions.

Through EcoActions, they can join cleanups and community events.

Through EcoWallet, they receive points and recognition.

Through EcoStories, every project becomes visible.

And through EcoVote, citizens can help choose which social projects should receive support first.

This is how we turn recycling from a hidden industrial process into a transparent public movement.

1:43–2:08 — Sukhrobjon / Russian / EcoKids and Art Tiles

Третий слой — EcoKids.

Мы хотим, чтобы дети не просто слышали слово “экология”.

Мы хотим, чтобы они участвовали в создании будущей среды.

В EcoKids ребёнок проходит мини-уроки, изучает сортировку отходов, видит цепочку “шина — крошка — плитка”, “пластик — композит — продукт”, создаёт дизайн плитки или скамейки и участвует в конкурсах.

Лучшие идеи могут стать реальными Art Tiles в школах и парках.

Представьте ребёнка, который видит во дворе плитку со своим дизайном и QR-историей.

Для него экология перестаёт быть теорией.

Она становится личным опытом.

2:08–2:34 — Azamat / English / Business Model and Scale

The business model has several revenue channels.

First, B2B sales to developers, construction companies, schools, sports facilities, factories, and private projects.

Second, B2G partnerships with municipalities, schools, kindergartens, parks, mahallas, and public infrastructure programs.

Third, premium and social product lines such as Art Tiles.

Fourth, digital ecosystem expansion through EcoApp, EcoKids, impact reporting, partnerships, and future ESG integrations.

Our model scales in stages: pilot production, certified products, public demonstration projects, B2B/B2G contracts, and then regional expansion across Central Asia.

This is not charity.

This is circular economy infrastructure with measurable social impact.

2:34–2:49 — Sukhrobjon / Russian / Traction and Team

Мы провели консультации и выезды на объекты со специалистами отрасли, получили практические рекомендации и уже имеем предварительные договорённости с малыми предприятиями о поставках резиновых отходов.

ZAMINAT.eco — это не только производство.
Мы добавляем цифровую и образовательную составляющую, превращая переработку в часть культуры, поведения и городской системы.

Следующий этап — пилотное производство, сертификация, первые продажи и первые демонстрационные объекты.

2:49–3:00 — Azamat / English / Final Investment Close

We are looking for strategic investors, grant partners, corporate sponsors, and government partners who want to enter early.

ZAMINAT.eco is not just about recycling.

It is about turning waste into products, products into revenue, revenue into public impact, and public impact into national green infrastructure.

Where waste ends — life begins.

Thank you.

4. Website Demo Flow

The website must function like a cinematic pitch stage. It should not be browsed freely. It must be prepared as a controlled demo route with 7 screens and predictable transitions.

Screen	Name	Main Message	Visual / Interaction	Speaker Cue
1	Hero	Where Waste Ends — Life Begins	Transformation visual: waste -> product -> infrastructure	Sukhrobjon opens after a 1-second pause.
2	Problem	Waste is unused economic value.	Plastic, tires, city needs, schools/parks/mahallas	Keep the problem short and strategic.
3	Product Engine	Recycled materials become products the market needs.	EcoTiles, curbs, benches, panels, Art Tiles	Show that this is a revenue-generating company.
4	Digital Layer	EcoApp makes recycling visible and	EcoMap, EcoActions, EcoWallet, EcoStories,	Khondamir performs quick controlled

		participatory.	EcoVote	clicks.
5	EcoKids	Children learn ecology by designing real products.	Child design -> contest -> Art Tile -> school installation	This is the emotional peak.
6	Business & Scale	Multiple revenue channels. One integrated impact system.	B2B, B2G, CSR/ESG, Central Asia expansion	Azamat delivers with confidence and numbers.
7	Investment Ask	Investment unlocks the first pilot cycle.	Equipment, certification, first sales, pilot objects	Final close: invitation, not begging.

Website Must-Have Demo Requirements

- Create a dedicated /pitch or /investor-demo route without distracting navigation.
- All sections must load instantly on the demo laptop. Avoid heavy 3D during the pitch.
- Use one controlled scroll or click per screen. No live searching, no unpredictable tabs.
- Prepare offline screenshots or a PDF backup in case internet fails.
- Make the traction screen visual: MCHJ, trademark application, formulas, SKU calculator, consultations, preliminary supply agreements, official social media.
- Do not display fake backend success as real production data. Use “MVP / pilot-ready / demo mode” wording where needed.

5. Traction and Proof Package

Investors do not invest only in vision. They invest when vision is supported by proof. Prepare a small digital proof folder and a fast visual traction screen.

Proof Item	Status to Show	What to Prepare	How to Mention
MCHJ registration	Officially registered enterprise	Registration certificate / company details	“We are legally registered and ready to operate.”
Trademark application	Application filed	Application receipt / number if available	“We are protecting the brand early.”
Product formulas	Prepared formulations	Formula sheets / technical summaries	“Our product logic is already developed for pilot validation.”

SKU calculation	Unit economics preparation	SKU calculator file, cost assumptions	“We understand cost structure and product margins.”
Theoretical performance indicators	Technical assumptions prepared	Performance ranges, testing roadmap	“Next step is accredited testing and certification.”
Official social media	Public brand presence launched	Instagram/LinkedIn/website links	“The movement is already visible publicly.”
Industry consultations	Field input received	Photos, notes, recommendations	“We validated practical requirements with industry specialists.”
Preliminary supply agreements	Rubber waste sourcing path	Letters/messages/MOUs if available	“We already started building raw material supply channels.”
Digital + education layer	EcoApp and EcoKids concept/MVP	Website demo, product specs, mockups	“We make recycling part of culture, not only production.”

6. Action Plan Before Pitch Day

Timeline	Task	Owner	Success Standard
7–10 days before	Finalize /pitch route and remove all unnecessary navigation.	Khondamir	Demo can be completed in under 3 minutes without errors.
7–10 days before	Collect proof documents: MCHJ, trademark filing, formulas, SKU calculator, consultations, supplier agreements.	Sukhrobjon + Azamat	All evidence is organized in one folder.
5–7 days before	Create final visuals: product engine, EcoApp modules, EcoKids flow, business model, traction, investment ask.	Sukhrobjon + Khondamir	Visuals look premium and consistent.

5 days before	Optimize demo website for speed; disable heavy 3D on pitch device.	Khondamir	No loading delays during rehearsal.
3–4 days before	Rehearse with timer at least 10 times.	All	Pitch consistently ends between 2:50 and 3:00.
2 days before	Prepare Q&A answers and evidence folder.	All	Team answers clearly without contradicting each other.
1 day before	Full technical rehearsal with the actual laptop, browser, internet, backup files.	Khondamir	No technical surprises.
Pitch day	Arrive early, test screen, internet, click flow, audio, and backup.	All	Team is calm and fully ready before stage time.

7. Presentation Instructions

Voice and Delivery

- Speak slower than normal. A premium pitch feels controlled, not rushed.
- Use short pauses after important lines: “not a recycling workshop”, “full-cycle platform”, “circular economy infrastructure”.
- Do not memorize like a poem. Memorize the meaning and key transitions.
- Russian sections should carry vision and emotional weight. English sections should carry business logic and scale.
- Never apologize, never say “we are just starting”, never sound uncertain. Say “our next stage is pilot production and certification”.

Body Language

- Stand still during key lines. Movement should happen only during screen transitions.
- When mentioning waste, hold or point to the physical sample if used.
- When mentioning product engine, turn slightly toward the product visuals.
- When saying “Where waste ends — life begins”, face the audience, not the screen.
- Do not read from the website. The website supports the speech; it does not replace you.

Website Operator Instructions for Khondamir

- Open the /pitch route before going on stage.
- Use full-screen browser mode and hide bookmarks/tabs if possible.

- Preload the full route once before the pitch starts.
- Do not click anything not rehearsed.
- Use prepared keyboard shortcuts or buttons: Next, Back, Reset Demo.
- Keep a backup PDF or screen recording ready in another tab, but do not show it unless the live site fails.

8. Key Messages to Repeat in Q&A

Investor Concern	Best Answer Direction
Is this charity or business?	It is a commercial circular economy infrastructure model. Social impact is built into the brand and growth model.
What do you sell?	Eco-tiles, rubber safety tiles, plastic tiles, curbs, benches, panels, Art Tiles, and future modular infrastructure elements.
Who pays?	B2B buyers, B2G partners, schools, parks, developers, facilities, private projects, CSR/ESG sponsors, and future digital ecosystem partners.
What is unique?	Full-cycle model: waste sourcing, product manufacturing, digital transparency, EcoKids education, citizen engagement, and visible public projects.
What stage are you at?	Pre-seed / pilot preparation: registered company, product formulas, SKU calculation, theoretical indicators, web MVP, social media, consultations, and supply discussions.
What do you need investment for?	Pilot production, equipment, certification/testing, first sales, demo objects, backend integration, working capital, and partnership expansion.
What is the risk?	The main risk is execution and certification. The plan reduces it through pilot testing, staged production, and verified product validation.

9. Important Aspects to Prepare

Website and Visuals

- ☐ Dedicated /pitch or /investor-demo route
- ☐ Fast-loading website on demo laptop
- ☐ No heavy Spline/3D during pitch
- ☐ Product visuals for EcoTiles / Art Tiles / curbs / benches / panels
- ☐ Clean business model visual
- ☐ Clear investment ask screen
- ☐ Backup PDF or video demo

Business and Financials

- ☐ SKU calculator cleaned and ready
- ☐ Pilot production cost estimate
- ☐ Approximate pricing and margin assumptions
- ☐ Target customer segments
- ☐ B2B/B2G sales strategy
- ☐ Investment ask and use of funds
- ☐ Pilot timeline

Legal and Trust

- ☐ MCHJ registration proof
- ☐ Trademark application proof
- ☐ Founder/team profile
- ☐ Basic privacy/terms pages or planned legal roadmap
- ☐ Supplier discussion proof
- ☐ Consultation notes/photos
- ☐ Certification/testing roadmap

Product and Technical

- ☐ Product formulas summary
- ☐ Theoretical indicators summary
- ☐ Raw material sourcing plan
- ☐ Production process overview
- ☐ Quality/testing plan
- ☐ First SKU priority list
- ☐ EcoApp/EcoKids roadmap

Stage Performance

- ☐ Script memorized by meaning
- ☐ 10 timed rehearsals completed
- ☐ Speaker transitions practiced
- ☐ Website click flow practiced
- ☐ Q&A rehearsed
- ☐ Team roles clear

- [] Backup plan ready

10. Do Not Say / Say Instead

Avoid Saying	Say Instead
We are just trying to recycle waste.	We are building a full-cycle Waste-to-Life infrastructure platform.
We need money to start.	Investment unlocks the first pilot cycle: production, certification, first sales, and demo objects.
Our app is fully ready.	We have a web MVP and digital architecture; backend integration is part of the next stage.
EcoVote is the whole project.	EcoVote is one trust layer inside the broader ecosystem: production, products, EcoApp, EcoKids, and impact.
We will do charity.	Social impact is built into the commercial model through product sales, partnerships, and citizen participation.
Maybe this can work.	This model is designed to scale from pilot production to B2B/B2G contracts and regional expansion.

11. Rehearsal Plan

The rehearsal goal is not only memorization. The goal is timing, stage confidence, website synchronization, and calm control under pressure.

1. Read the script slowly once without timing.
2. Record the first full rehearsal and check speed, clarity, and body language.
3. Rehearse with the website operator and exact screen transitions.
4. Cut any sentence that pushes the pitch beyond 3 minutes.
5. Practice the final 20 seconds until it sounds powerful and effortless.
6. Run a full dress rehearsal in the same clothes or similar stage style.
7. Rehearse Q&A separately with tough investor questions.
8. Complete one final rehearsal on the actual demo laptop.

12. Final Pitch-Day Checklist

- ☐ Laptop fully charged + charger
- ☐ Website opened and preloaded
- ☐ Backup hotspot
- ☐ Backup PDF or video demo
- ☐ Physical product/waste sample if used
- ☐ Proof folder ready
- ☐ Team roles confirmed
- ☐ Timer ready
- ☐ Water available
- ☐ Phones silent
- ☐ Opening line memorized
- ☐ Final line memorized
- ☐ Investment ask clear
- ☐ Q&A documents ready

FINAL INTERNAL STANDARD

The audience should leave with one thought: “This is not a small eco idea. This is a scalable green infrastructure company from Uzbekistan.”
